SKILLS

TECHNICAL SKILLS

- **Programming Tools:** NodeJS, Typescript, Javascript, Java, MongoDB, SQL, Redis, HTML, CSS
- **Framework:** ReactJS, NestJS, REST, Next.js, Spring
- **Testing:** Unit & Integration Test (Jest), Performance Test (K6)
- **Others Development Tools:** Git (Github & Gitlab), Gitlab CI/CD, Argo, Grafana, Amazon Web Services (AWS), Confluent, Kafka, RabbitMQ, Servicenow, Git-Ops, Terraform

LANGUAGE

- English Conversation & Reading
- Malay Native

WORK EXPERIENCE

PAYMENTS NETWORK MALAYSIA SDN BHD (PAYNET)

Gardens, Kuala Lumpur

Software Engineer (Backend) – Mule Buster Team

Feb 2026 – Current

- Helping on delivering integration between iPRS (Integrated Police Reporting System) and NFP (National Fraud Portal) for any reported scam from police station can be channeled to NFP directly.
- Co-developing User Access Management (UAM) service inside NFP to adopt RBAC (Role Based Access Control) since previously users being assigned permission directly inside the system to make UAM more consistent and better compliance tracking.
- Currently co-developing features that will accept assessment and report a tampered ID of a scammer thus, any tampered or fake ID of a user can be reported and be assessed into any reporting scam incidents.
- Working primarily in Spring, Postgres, Java and Gitlab.

ORSTED SERVICES MALAYSIA SDN BHD

Bangsar, Kuala Lumpur

Technical Consultant – Servicenow Team

Oct 2024 – Feb 2026

- Leveraged Servicenow as a service to manage and resolve IT service requests and any incidents being reported with ensuring it would be resolved within a timely response based on SLA agreed.
- Updated and maintained a new survey for service desk satisfaction to get better understanding on user perspective and user response from the service desk team.
- Help to resolving issues and developing in GRC Internal Audit management inside the Orsted under Internal Control department to help them managing financial risk and audit.
- Working primarily in Servicenow, and Javascript.

SETEL VENTURES SDN BHD

Bangsar, Kuala Lumpur

Fullstack Software Engineer – Treasury Team

Sep 2021 – Sep 2024

- Maintain and optimize legacy repository that is critical to the business such as Merchant services, and Treasury services which these services are heavily affecting on merchant management and transaction ledger.
- Implemented a better reliance on sub-wallets transactions and main wallets transactions in Setel's payment system to make sure accuracy and consistency between the sub-wallets and the main wallets.
- Implemented Duitnow transfer through sub-wallets and transactional ledger in the company to make sure Setel's payment services accepted Duitnow transfer transaction by using Duitnow proxy transfer.
- Inherited 15 services to maintain reliability and system uptime to avoid any disruption due to high traffic and issue raised during development.
- Configure and manage encrypted government's initiatives related (E-Madani & E-Belia) reports to be delivered to mediator server to ensure any reporting regarding transaction made for government's initiative are being recorded.
- Working primarily in ReactJs, MongoDB, Redis, Grafana, NestJs, Jest, and Typescript.

Fullstack Software Engineer – Payment Engine Team

- Co-develop micro-service APIs for connection towards payment gateways for top-ups transaction such as FPX and card transaction for direct charge, pre auth and capture method.
- Co-develop an API of payment switching that would determine which payment gateways a transaction needed to be routed to by using a circuit breaker method and managed the transaction accordingly before reflecting to the Setel payment system with PCI-DSS certified.
- Build a routing change management feature inside Setel Admin Portal with a checker and maker capability with the

- conjunction of trace logging history to save any changes or request being made for changing the routing payment system by using micro-frontend method.
- Enhance a database call for a high traffic function with using a cache method with Redis to reduce the call to database that likely have minimal changes on data thus would reduce the cost.
- Enhance reliability of the system by doing performance testing using K6 to make sure the system being build can handle large traffic.
- Prepare a deployment setup for our team's API services to be deployed to Development, Staging, Pre-Production and Production.
- Working primarily in ReactJs, MongoDB, Redis, Grafana, NestJs, Jest, and Typescript.

Fullstack Software Engineer – Acquiring Team

- Build encrypted key management features inside Setel Admin Portal with a checker and maker capabilities to ensure any changes in key management is being authorized and acknowledged by 2 levels of hierarchy.
- Co-developed functions call to HSM (Hardware Security Module) for clear key encryption to be encrypted by the HSM and returned the encrypted key by implementing a hexagonal architecture method.
- Maintaining an API of series of function calls towards Maybank and patched any updates needed prior to any updates or testing in the specification between Maybank and Setel.
- Develop an API for having a series of function calls and parsing the response and request of ISO8583 standard between CIMB and Setel system with implementing a buffer request for TCP connection towards CIMB.
- Led a successful SIT testing between Maybank and Setel system on card payment system using terminal from OPT and IPT terminal with the conjunction of external testing by third parties.
- Working primarily in ReactJs, NestJs, Grafana, Jest, and Typescript.

CERTIFICATIONS

ISTQB CERTIFIED TESTER FOUNDATION LEVEL (CTFL)

Credential ID: MY0061-21

Malaysian Software Testing Board (MSTB)

Issued: December 2021

EDUCATION

UNIVERSITI KEBANGSAAN MALAYSIA (UKM)

Bachelor of Software Engineering (Information System Development)

Cumulative GPA: 3.76 / 4.0

Core Subjects: Software Requirement Engineering, Web Programming, Advance Database System, Software Testing, Decision Support System, Data Analytics

Awards: JPA Scholar, Dean's List, Team Selangor Ambassador, Golden Key Honor Society's Member, Faculty Graduate Award

Bangi, Selangor

2018 - 2021

UNIVERSITI MALAYSIA PERLIS (UniMAP)

Diploma in Computer Engineering

Cumulative GPA: 3.75 / 4.0

Core Subjects: Digital System, Microcontroller, Database System, Object Oriented Programming, Electronic Circuits, Electronic Instrumentations

Awards: Dean's List, Anugerah Buku Konvokesyen

Pauh, Perlis

2015-2018

ACTIVITIES

COMMITTEE IN AWS UG MEETUP SETEL

Setel Ventures Sdn Bhd

2023

- Helps in participants engagement relations, by providing the form for participants to register, besides that help to maneuver participants inside the office. Engaged in facilitation the coordination of AWS Meetup attendees, ensuring that their experience is enjoyable and welcoming from start to finish.

FINALIST IN SOFTWARE TEST DESIGN COMPETITION

Malaysia Software Testing Board (MSTB)

2019

- Developing a test plan included with test case depends on the situation or study case that has been given. Besides, there are also pitching session where needed to present our test plan and proposal toward judges which makes to convince the best test plan as for solution for the case study.

FINALIST 3 DAYS OF CODE HACKATHON

Multimedia University (MMU)

2019

- Developing Education in Augmented Reality (EDAR) mobile application where users could learn while enjoying games with an interactive augmented reality components that showed from the scanned object from their textbook. It could achieve one of the missions in education advancement in Malaysia in terms of digitalization.
